PROFILE SUMMARY

Data Analyst driving procurement spend analysis for 8 client accounts at Simfoni, uncovering spending patterns across \$100M–\$145M in spend and 5,000+ monthly transactions using Power BI and Snowflake. Improved data quality by 90% through systematic classification and normalization of supplier and transaction records. Microsoft Certified Fabric Analytics Engineer Associate.

PROFESSIONAL EXPERIENCE

Data Analyst | Simfoni | Remote, India | May 2026 – Present

Joined Simfoni in February 2026 as a Customer Support Specialist and transitioned to the Data Analytics team in May 2026.

- Built and maintain 4 Power BI dashboards, refreshed monthly, tracking procurement spend, supplier performance, and category level KPIs, and Saving Opportunity for 8 client accounts.
- Analyze over \$100M–\$145M in total procurement spend and 5,000+ monthly transactions to identify spending patterns across categories and suppliers, informing client sourcing decisions.
- Classified and normalized procurement spend data against a standardized taxonomy, correcting supplier misclassification errors and improving data quality by 90% and consistency across client reporting.
- Partner with business and procurement stakeholders across 8 client accounts to gather analytical requirements, present findings to senior management and non-technical audiences, and deliver ad-hoc analysis while managing multiple concurrent projects.
- Validate dashboard accuracy through QA testing of SQL queries and data integration in snowflake, resolving visualization and usability issues before delivery.

Data Analyst Intern | Healthorate | Bhopal, India | Jun 2025 – Sept 2025

- Scraped, cleaned, validated and compiled data for more than 20,000 labs from various web sources to build the platform's initial lab database ahead of launch.
- Built a lab comparison framework in excel to rank labs for given test, reducing manual comparison effort by 50% for the product team during feature testing. decisions.

PROJECTS

Procurement Spend Analytics Dashboard | Power BI, Power Query, DAX | [GitHub Link](#)

- Built a 3-page Power BI dashboard on 950 transactions across 80 suppliers, tracking \$71.3M in spend and \$1.23M in savings opportunities.
- Analyzed PO match rates (74.2% avg) and approval cycles (23 days avg), flagging a 33% match rate outlier among top vendors
- Built a star schema model with drill down navigation, exposing a 6.8% contract compliance gap against target.

Real-World Cryptocurrency Insights & Email Automation | Python, Requests, Pandas, Schedule, Smtplib | [GitHub Link](#)

- Built a Python script ranking coins by 24h change via CoinGecko API, flagging top 10 gainers and bottom 10 decliners to replace manual price checks.
- Scheduled a daily 8:00 AM run that saves a timestamped 9-column CSV and emails it as an attachment, with error handling that reports API failures instead of sending incomplete data.

Spotify Streaming Trends Analysis | SQL Server | [GitHub Link](#)

- Performed SQL-based analysis on Spotify data using window functions, subqueries, and CTEs to uncover trends in track popularity, artist performance, and cross-platform engagement.
- Found licensed tracks have 497M comments and the top album (VIDA) has 16.2B views.
